

X-Sealant GEL Unshielded Twisted Pair Cables - The Best Connection For The Home and Office

X-Sealant Gel Twisted Pair (UTP and STP) Cables are a specially designed cable with formulated high resistant connector gel used in the male plugs of the cable which provides a higher quality cable to home users. These cables are used for connection of the telephone in your home as well as connections to devices such as DSL modems, routers, slingbox, and other internet connection devices.

Why Purchase the X-Sealant GEL for the home and office?

The advantage to the home user includes many features such as ease of inserts with the lubricant ability of the gel, longer lasting durability of the connector as a result of the gel and the elimination of oxidation by humidity. The Gel is made in colors to easily color code your cables for the items you are connecting. But the most important feature for the home user is the superior reduction in the wear of a cable used in the home. X-Sealant Gel cables are tougher and more rugged to make connections better. Many cables have male plugs which also have a very tight fit when inserted into the jack. X-Sealant Gel cables take care of this problem by providing lubricant as well.

X-Sealant GEL Cable Wear Better and have Anti-Wear Properties

X-Sealant GEL contains a chemical which is the lowest coefficient of friction available in the marketplace. The chemical particles in X-Sealant GEL cables provide less irregularities of mating of cables to the RJ connector on electronic devices and on a telephone wallplate. The Gel is like snowflakes in a snowball which forms a smooth, lubricated surface.

X-Sealant GEL provides improved anti-wear properties, is water resistant, will not be washed away by acids or alkalis, and resists temperatures to 750°F. **X-Sealant Gel** has an excellent film strength and long life protection against dust, grime, corrosion and rust.

Benefits In The Home:

- Last Longer
- Perform Better
- Improves the Ease of Insertion
- Prevents Wear
- Excellent resistance to water, saltwater and most detergents
- Lubricates the connectors contact for better mating
- Resist dust and grime
- Superior protection from exposure to humidity

X-Sealant Gel cables have a superior oxidation barrier. X-Sealant GEL cables use the patent pending Xmultiple X-Sealant GEL RJ male plug connector. The X-Sealant GEL is a multi-purpose synthetic lubricant, containing anti corrosion particles held in suspension. X-Sealant GEL lasts longer and outperforms other non Gel cables. The GEL is made to prevent corrosion of contact pins and metal used in electronic connectors.

X-Sealant Anti-Corrosion Gel remains pliable, will not harden, run, drip or crack and resists changes due to mechanical use of the cable. Quality control measures insure maximum storage life and no oil separation of the compound. It is clear in appearance, and environmentally friendly. With X-Sealant Gel cables users get a superior product without paying a big price.
